IMPROVED 3D VIEW

Navigate your projects like never before! With improved highlighting, smooth animations, and customizable settings, the 3D view now gives you full control and a clearer overview of your design.

Enhanced 3D view – Jump straight to any selected node, cable, or pathway, and see your selections highlighted instantly in 3D. Navigation has never been easier!

New 3D settings menu – Take full control of your visualization with brand-new options:

- **Sync selection** – Instantly highlight selected objects.
- **Jump to selected** – Zoom directly to your chosen object.
- **Animated zoom** – Add a smooth, flowing animation to the “Jump to Selected” feature.
- **Emphasize segments** – Easily spot pathways that exceed your chosen fill level.
- **Cross section toggle** – Turn pathway cross-section views on or off.
- **Hide sidebar** – Go full-screen with a clean 3D view only.

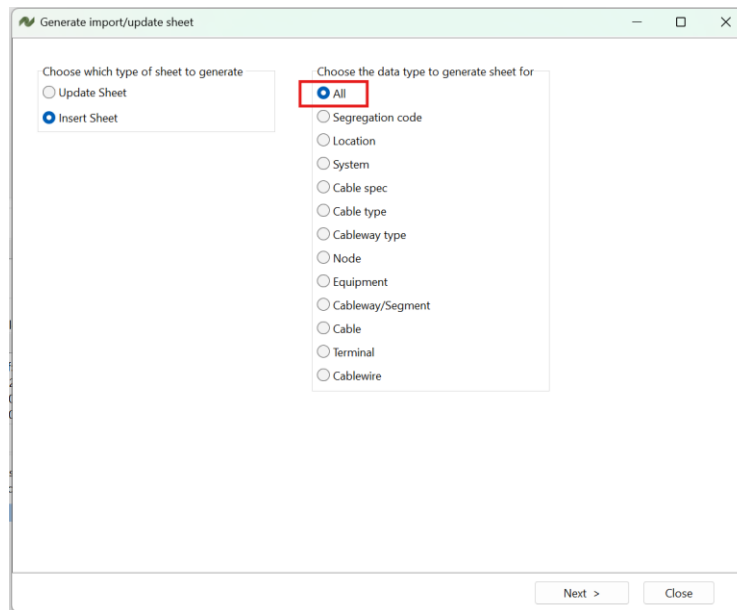

NEW IMPORT & EXPORT OPTIONS

Managing your data just got easier! You can now import and export everything in one Excel file, making setup and updates faster and more efficient.

Updated super user permissions– Super users can now import data directly into their database also from PC|Automation and PC|Cabledim

Streamlined import & export – Import sheets can now be exported into one Excel file (with each data type on its own tab) and imported back in just as easily.

UPDATED REPORTS

Your reports are now more accurate and complete!

More accurate reports – Extra cable length is now included on cable drums and in pull reports.

Logo flexibility – Upload logos in more formats, including .png and .jpg.

Improved reliability – Fixed issue where Cable Batch Action reset cable status dates.
